

Hamza Asad

SOFTWARE DEVELOPER

TECHNICAL SKILLS

- Python
- Java
- Css
- HTML
- Machine Learning
- OOP (Object-Oriented Programming)
- MySQL (Database Language)
- Problem Solving & Logical Thinking
- Debugging
- Communication

PERSONAL DETAILS

Birth date

22/08/2000

Nationality

South African citizen

Address

53 Chantilly Complex, Midrand, Halfway Gardens, Gauteng province, South Africa.

PROFESSIONAL EXPERIENCE

 **Software Developer/Engineer**
HYPERIONDEV

H.A

I have a goal of helping people solve real world problems to make their lives much easier. I meet up with clients online or in the real-world to gather information (such as design ideas and any type of additional information) on how they need their software, game, app, etc. One of my algorithms is planning the software, game or app thoroughly, step-by-step, using pseudocode (simple English terms/explanation) before I start working on the program. This is done so that the client is satisfied with what the outcome shall be. I would rather go a whole day or week researching then giving up and letting down my client. So I do not give up easily.

 **Interests**
INTERESTS AND HOBBIES:

H.A

- Sports
- Gyming
- Physical fitness
- Travelling
- Exploring new places
- Working and getting to know people

 **About me**
A MESSAGE ABOUT MYSELF

H.A

I have chosen to come into the tech career from the time I was in primary school and always had dreams and goals of perfecting something in the IT field. I thought that it would not be very easy, so I started gathering information from google and different sources through the internet, including taking interviews from people that were already in the tech career for my self-knowledge. As time passed and I got into secondary school, I realized that technology is growing much faster and rapidly then before. That was another reason that pushed me into gathering more knowledge. By this time I have made my mind in joining the software development field. Fast forward to when I started coding, it got really difficult and challenging. I sometimes stopped coding for an hour and used to think of different ways to find the solution to my problem. I have never given up on my tasks, projects, work and goals until today, I pushed myself forward to reach the end of it.

This is a brief message about myself.

EDUCATION

 **Software Engineering graduate @:**
HYPERION DEVELOPMENT

05/02/2020 - 16/10/2020

CERTIFICATIONS

 Bootcamp Graduate Certificate

SALARY EXPECTATIONS

 15 000 - 20 000 +
